Table 1: Forecasting variables

Black = published value. Red in [brackets] = recalculated value when the printed number or its significance stars differ. Matching entries appear once.

Variables covered by the SPF point forecasts and their definitions.

Variable	Definition
Section 1: U.S. Business Indicators	
NGDP	Nominal Gross Domestic Product (GDP), levels, seasonally adjusted, annual rate, in billions USD.
PGDP	Gross Domestic Product (GDP) price index, chain weighted, seasonally adjusted, 2010 base year.
CPROF	Level of nominal corporate profits after tax excluding inventory valuation adjustment (IVA) and capital consumption adjustment (CCAdj). Seasonally adjusted, annual rate, in billions USD.
UNEMP	Civilian unemployment rate, levels, seasonally adjusted, percentage points.
EMP	Nonfarm payroll employment, seasonally adjusted, in thousands of jobs.
INDPROD	Industrial production index, seasonally adjusted, index, 2010 base year.
HOUSING	Housing starts, seasonally adjusted, annual rate, in millions.
TBILL	T-Bill rate, 3-month, levels, percentage points.
BOND AAA	AAA corporate bond yield, levels, percentage points.
BOND BAA	BAA corporate bond yield, levels, percentage points.
TBOND	Treasury bond rate, 10-year, levels, percentage points.
Section 2: Real GDP and Its Components	
RGDP	Real Gross Domestic Product, seasonally adjusted, annual rate, 2010 base year.
RCONSUM	Real personal consumption expenditures, seasonally adjusted, annual rate, 2010 base year.
RNRESIN	Real nonresidential fixed investment, seasonally adjusted, annual rate, 2010 base year.
RRESINV	Real residential fixed investment, seasonally adjusted, annual rate, 2010 base year.
RFEDGOV	Real federal government consumption and gross investment, seasonally adjusted, annual rate, 2010 base year.
RSLGOV	Real state and local government consumption and gross investment, seasonally adjusted, annual rate, 2010 base year.
RCBI	Real change in private inventories, levels, chain-weighted real change in private inventories. Seasonally adjusted, annual rate, 2010 base year.
REXPORT	Real net exports of goods and services, levels, chain-weighted real net exports. Seasonally adjusted, annual rate, 2010 base year.
Section 3: CPI and PCE Inflation	
CPI	Headline CPI inflation rate, seasonally adjusted, annual rate, percentage points.
CORECPI	Core CPI inflation rate, seasonally adjusted, annual rate, percentage points.
PCE	PCE inflation rate, headline chain-weighted, seasonally adjusted, annual rate, percentage points.
COREPCE	Core PCE inflation rate, core chain-weighted PCE inflation rate, seasonally adjusted, annual rate, percentage points.

Audit note: Definitions reproduced from the supplied manuscript source. These are documentary definitions, not statistical estimates.

Table 2: Definitions of forecaster characteristics

Black = published value. Red in [brackets] = recalculated value when the printed number or its significance stars differ. Matching entries appear once.

Forecaster characteristics and their definitions in the supplied manuscript.

Characteristic	Description
Name	Full name of the forecaster as listed in the SPF acknowledgement panel.
Gender (inferred)	Gender inferred based on publicly available information (e.g., name, social media).
Affiliation	The institution or company the forecaster is associated with (e.g., university, bank).
Affiliation type	Type of organization the forecaster works for, such as academic, financial, forecasting center, government, etc.
Position in given year	The forecaster's job title or role when the forecast was made (e.g., professor, economist).
Highest degree earned	The highest degree the forecaster has earned (e.g., Bachelor, Master, PhD).
Degree area/field	The field of study for the forecaster's degree (e.g., Economics, Finance).
Graduation year	The year the forecaster completed their highest degree, used to estimate experience and age.
Alma mater	The institution where the forecaster earned their highest degree.
Company location	The geographic location of the forecaster’s affiliated institution or company.
Gives interviews	Whether the forecaster gives public interviews or engages with media (yes/no).
Has Twitter	Whether the forecaster has a public Twitter profile (yes/no).

Audit note: Definitions reproduced from the supplied source text. Inferred personal characteristics are the manuscript’s classifications.

Table 3: Descriptive statistics of forecast variables

Black = published value. Red in [brackets] = recalculated value when the printed number or its significance stars differ. Matching entries appear once.

Number of observations, mean, standard deviation, skewness, kurtosis, median, minimum, maximum and first-order autocorrelation.

Variable	N	Mean	SD	Skewness	Kurtosis	Median	Min	Max	ACF(1)
Section 1: U.S. Business Indicators									
Nominal GDP (x1000)	5308	16.03	4.72	0.55	-0.44	15.01	8.68	27.62	0.90

Audit note: The supplied calculation repeats realizations across forecaster rows (N=5,308); ACF(1) follows stored row order. Series labeled x1000 are divided by 1,000. All displayed values match.

Table 4: Forecast accuracy of human and AI-generated SPF forecasts

Black = published value. Red in [brackets] = recalculated value when the printed number or its significance stars differ. Matching entries appear once.

Mean absolute errors of median AI and human SPF forecasts. Horizons 0, 1 and 4 denote the nowcast, one quarter ahead and four quarters ahead.

Audit note: Recalculation follows supplied code: MAEs are weighted by panel size through a duplicate join; significance tests use signed mean errors, although the published description refers to MAE differences. Randomized p-values use 10,000 draws (seed 20261031); red differences at printed precision can reflect simulation variation. Stars: * p≤0.10, ** p≤0.05, *** p≤0.01.

Table 5: Percentage survey quarters where AI is more accurate than the human SPF

Black = published value. Red in [brackets] = recalculated value when the printed number or its significance stars differ. Matching entries appear once.

Share of survey quarters in which the AI median forecast is at least as accurate as the human median. Values are fractions, not 0–100 percentages.

Audit note: All MAEs match. Supplied code selects the best AI persona across time and compares it with the human median on that persona's quarters; it does not select the best human forecaster. Randomized p-values use 10,000 draws (seed 20261031); red differences at printed precision can reflect simulation variation. Stars: * p≤0.10, ** p≤0.05, *** p≤0.01.

Table 7: Cross-Sectional Disagreement by Forecast Horizon

Black = published value. Red in [brackets] = recalculated value when the printed number or its significance stars differ. Matching entries appear once.

Mean cross-sectional standard deviations, their ratio, paired t-statistic and number of quarters. Sample: 1999–2023.

Variable	σh+1	σh+4	Ratio	t-stat	N
Panel A: Human					
CPI	0.972	0.701	0.72	-6.82***	100
UNEMP	0.155	0.356	2.29	20.98***	100
RGDP	40.16	99.90	2.49	14.54***	100
TBILL	0.126	0.363	2.88	18.11***	100
Panel B: AI					
CPI	0.266	0.253	0.95	-0.64	94
UNEMP	0.075	0.115	1.53	4.88***	72
RGDP	122.3	171.0	1.40	9.14***	91
TBILL	0.069	0.116	1.68	6.28***	73

Audit note: All numeric cells match, but the Human panel actually uses horizons 0 and 3, while the AI panel uses 1 and 4. Published column labels are retained. Quarters with zero dispersion at either horizon are excluded. Stars: *** p<0.01.

Table 8: Relative accuracy of AI forecasts with fewer prompt inputs

Black = published value. Red in [brackets] = recalculated value when the printed number or its significance stars differ. Matching entries appear once.

Mean absolute errors relative to the baseline AI forecast. Ratios above one indicate lower accuracy. Significance markers are compared separately from ratios.

	Generic		No real-time data		No real-time or past SPF data		Recall

Average	**1.21**	1.00	**1.76**	**1.06**	**6.08**	**1.87**	**17.16**

Audit note: All ratios match. Red entries reflect different significance markers. The supplied test swaps AI/Human within each ablation and compares signed means, rather than testing baseline/ablation MAE differences. Randomized p-values use 10,000 draws (seed 20261031); red differences at printed precision can reflect simulation variation. Stars: * p≤0.10, ** p≤0.05, *** p≤0.01.

Table 9: AI Forecast Performance During Unexpected Events

Black = published value. Red in [brackets] = recalculated value when the printed number or its significance stars differ. Matching entries appear once.

AI forecast performance around unexpected events. Both reported event Z-scores are recalculated; event dates and deadline offsets are retained.

Event	Event date (days after survey deadline)	Relevant variables	Average Z-score	
			Relevant variables Z-score	All variables Z-score
9/11 Attacks	2001-09-11 (27 days)	RGDP, UNEMP, CPI, TBILL, TBOND	0.28	0.01
Lehman Brothers Collapse	2008-09-15 (39 days)	RGDP, UNEMP, CPI, TBILL, TBOND, HOUSING	1.49	0.49
Flash Crash	2010-05-06 (-5 days)	RGDP, CPI	0.00	-0.12
S&P Downgrade of U.S. Debt	2011-08-05 (-3 days)	TBILL, TBOND, RGDP	0.26	-0.06
COVID-19 Pandemic Declaration	2020-03-11 (29 days)	RGDP, UNEMP, CPI, HOUSING, INDPROD	1.19	0.77
Russia-Ukraine War	2022-02-24 (17 days)	RGDP, CPI, TBILL, TBOND	0.72	0.29
Silicon Valley Bank Collapse	2023-03-10 (31 days)	RGDP, UNEMP, TBILL, TBOND	-0.20	-0.09

Audit note: All Z-scores match. Event dates and days from the survey deadline are manuscript metadata, not independently validated. The matching calculation uses h0 for Flash Crash and h1 for other events, including the pre-deadline S&P downgrade.

Table 10: AI Forecast Error Regressions on Knowledge Cut-Off Dummy Variable

Black = published value. Red in [brackets] = recalculated value when the printed number or its significance stars differ. Matching entries appear once.

OLS regressions of absolute one-quarter-ahead AI forecast errors on an indicator for survey dates after October 2023. Standard errors in parentheses.

	RGDP	UNEMP	CPI	TBILL
Intercept	366.06***	0.714***	2.135***	0.652***
	(65.43)	(0.141)	(0.210)	(0.076)
I(t > Oct 2023)	715.56*	-0.539	-1.323	-0.137
	(340.01)	(0.732)	(1.091)	(0.397)
Observations	108	108	108	108
R^2	0.040	0.005	0.014	0.001

Audit note: All estimates match. The calculation has 108 observations because it concatenates baseline and OOS files with overlapping 2023 quarters; there are 104 distinct quarters. Standard errors are conventional OLS errors. Stars: * p<0.05, ** p<0.01, *** p<0.001.

Table 11: Forecast Revision Regressions: Human vs AI

Black = published value. Red in [brackets] = recalculated value when the printed number or its significance stars differ. Matching entries appear once.

OLS forecast-revision regressions: error correction and consensus tracking, separately for human and AI panels. Published and reconstructed estimates are shown together.

	Error Correction				Consensus Tracking			
	RGDP	CPI	UNEMP	TBILL	RGDP	CPI	UNEMP	TBILL
Panel A: Human								
Lagged Error(i,t−1)	0.981*** [0.657***]	0.881*** [0.327***]	0.956*** [1.083***]	0.975*** [1.105***]

R^2	0.568 [0.524]	0.354 [0.556]	0.946 [0.912]	0.827 [0.775]	0.776 [0.784]	0.551 [0.792]	0.086 [0.154]	0.716 [0.800]

Audit note: UNRESOLVED ESTIMATOR: the red values are a qualified reconstruction, not proven corrections. The generating script is absent. Alternative lag/consensus definitions did not recover the published coefficients. Robust standard errors are in parentheses. Stars: *** p<0.01.

Table 12: Reasoning Categories by Economic Period

Black = published value. Red in [brackets] = recalculated value when the printed number or its significance stars differ. Matching entries appear once.

Percentage of reasoning responses containing each category, by economic period. The same response can belong to multiple categories.

		Detailed Categories				ECB Aggregation	
Period	**N**	**Mechanical**	**Policy**	**Model**	**Event**	**Model-Based**	**Judgment-Based**
Normal	4,626	98.6%	55.2%	86.7%	19.7%	99.6%	63.3%
Financial Crisis	346	84.7%	34.4%	37.6%	82.4%	88.4%	87.6%
COVID-19	204	72.1%	59.8%	26.5%	77.0%	72.5%	79.9%
Inflation Shock	212	85.4%	87.3%	97.2%	30.2%	98.1%	87.7%

Audit note: All counts and percentages match using all 5,388 raw responses, including 80 placeholder-name rows. Categories are nonexclusive. The caption’s separate claim that all crisis-versus-normal differences have p<0.001 was not independently validated.

Table B.13: Out-of-sample forecast accuracy (mean absolute errors) of SPF and AI-generated SPF forecasts

Black = published value. Red in [brackets] = recalculated value when the printed number or its significance stars differ. Matching entries appear once.

Published out-of-sample MAE table. The original third horizon label is shown with its recalculated data horizon in red beside it.

PCE Inflation Rate	0.96 [0.66]	**0.85** [0.71]	0.51 [0.50]	0.80 [0.51]	**0.68** [0.51]	1.00	**0.24** [0.15]	0.63 [0.35]	1.00 [0.51]
Core PCE Inflation Rate	0.83 [0.51]	**0.61** [0.52]	0.50 [1.00]	**0.53** [0.37]	0.54 [0.43]	0.51 [0.50]	**0.00**	0.08 [0.09]	1.00 [0.50]

Audit note: UNRESOLVED DATA / METHOD: red values use the older AI workbook, best AI per quarter versus the human median, and realized targets through 2024Q4. This historical reconstruction differs from the best-human rule in the caption. Red entries are not proven corrections. Randomized p-values use 10,000 draws (seed 20261031); red differences at printed precision can reflect simulation variation. Stars: * p≤0.10, ** p≤0.05, *** p≤0.01.

Table D.15: Forecast accuracy (mean absolute errors) of AI-generated and AR(1) SPF forecasts relative to human accuracy

Black = published value. Red in [brackets] = recalculated value when the printed number or its significance stars differ. Matching entries appear once.

MAEs of AI and AR(1) forecasts relative to human accuracy, with Diebold–Mariano test p-values.
